Professional Summary

Senior cloud, platform, and enterprise integration architect with more than 15 years of experience designing, building, modernizing, and supporting distributed systems, SaaS platforms, data platforms, and mission critical enterprise applications.

Experienced across Azure, AWS, and GCP, with hands-on background in cloud-hosted systems, Azure SQL, Docker, Kubernetes, CI/CD, RESTful APIs, messaging platforms, and SQL-backed data architectures.

I specialize in designing reliable cloud-ready architectures, reusable integration layers, high-performance data pipelines, and maintainable platform components that support complex, multi-customer environments.

Known for strong architectural judgment, rapid problem diagnosis, production stability, and the ability to connect application, data, integration, infrastructure, and operational concerns into practical cloud solutions.

Core Competencies

- Cloud architecture and platform modernization
- SaaS architecture and multi-tenant platform design
- RESTful APIs, microservices, and distributed systems
- SQL Server, Azure SQL, PostgreSQL, and data platform reliability
- Legacy modernization and cloud migration support
- Azure, AWS, and GCP cloud environments
- Docker, Kubernetes, and CI/CD delivery patterns
- Performance tuning, incident diagnosis, and production support
- Architecture guidance, stakeholder alignment, and technical leadership

Experience

Independent Technical Projects & Platform Engineering

04/2024 – current

- Architected and developed ReviewNudge™ (reviewnudge.dourl.net), a multi-tenant, micro-SaaS platform that automates customer review requests, follow-ups, workspace administration, and review-status tracking for service businesses.
- Designed and developed Portmason™ (www.etal.solutions), a portable automation platform that standardizes application provisioning, deployment, configuration, and operations across local and cloud environments.
- Designed and implemented .NET applications, APIs, integration components, automation workflows, and relational data solutions using cloud-ready architectural patterns.
- Built repeatable development and runtime environments using Docker, cloud platforms, and documented deployment practices.
- Developed reporting and data-processing workflows and applied A.I.-assisted automation to u manual overhead.
- Designed, built, and maintain the public Et al Solutions technology platform (https://etal.solutions), demonstrating modern web architecture, API integration, automated deployment, and technical content delivery.

Project Consulting Services, Inc. (via TEKsystems) — Senior Consultant

Industry / Client Focus: Oil & Gas, provides professional services for energy infrastructure

08/2015 – 04/2024

- Built and supported middleware systems integrating multiple enterprise platforms using SQL-based data pipelines, messaging patterns, and service-oriented designs.
- Reduced data processing latency from 24+ hours to near real-time through event-driven and optimized data flow designs.
- Designed and implemented RESTful integration layers and backend services supporting distributed enterprise systems.
- Worked with cloud-hosted environments, including Azure SQL and related services, to maintain system reliability and performance.
- Established SQL performance standards and tuning practices across large-scale relational systems, including SQL Server and Azure SQL.
- Partnered with engineering and infrastructure teams to troubleshoot production systems and improve scalability, reliability, and performance.

Planned Career Sabbatical & Independent Technical Projects

03/2014 – 08/2015

- Took an intentional career break while continuing hands-on technical work and professional development.
- Built .NET/MVC and browser-based applications using HTML5, CSS3, JavaScript, and SQL-backed application architecture.
- Developed responsive user interfaces, database-driven workflows, reporting views, and analytics outputs.
- Explored legacy-modernization approaches using web applications, relational databases, APIs, and integration patterns.

Steton Technology Group — Lead Architect

Industry / Client Focus: Food & Hospitality, SaaS platforms, mobile data collection

01/2004 – 03/2014

- Led architecture, development, and operation of a multi-tenant SaaS QA auditing platform supporting thousands of enterprise users.
- Designed scalable data models, backend systems, and reporting layers to support high-volume concurrent workloads across multiple customers.
- Implemented cloud-based infrastructure improvements using Azure and AWS to improve scalability, availability, reliability, and system performance.
- Designed a disaster recovery strategy with a 4-hour recovery time objective and 8-hour recovery point objective, incorporating encryption throughout the disaster recovery lifecycle.
- Established architectural patterns for performance, extensibility, maintainability, and operational stability across the platform.

Technical Skills

Cloud Platforms

Azure, AWS, GCP, Azure SQL Database, Azure SQL Managed Instance, cloud-hosted SaaS platforms

Cloud & DevOps

Docker, Kubernetes, CI/CD pipelines, GitHub Actions, Terraform, Jenkins, system monitoring, troubleshooting, production support

Architecture

Cloud architecture, SaaS architecture, multi-tenancy, distributed systems, microservices, SOA, event-driven architecture, 12-Factor App, SOLID, CQRS

Backend & APIs

C#, .NET Core / Web API, RESTful APIs, asynchronous processing patterns, MVC, reusable service components

Data & Databases

SQL Server 2022, Azure SQL Database, Azure SQL Managed Instance, PostgreSQL, Redis, SQLite, Oracle (8i), query optimization, indexing strategies, data platform reliability

Programming & Scripting

C#, Java, Python, JavaScript, TypeScript, Bash, PowerShell, T-SQL, PL/SQL, HTML, CSS

Leadership

Architecture guidance, technical mentorship, stakeholder alignment, requirements translation, cross-team collaboration
